

**Oxy-pH Boost™ can be used both orally and topically to kill yeast fungus and bad bacteria**

## Recommended Oral Use for Pets

**For a healthy Immune System** Once a day; Mix 1-2 drops, per each 20 lbs. of your pet's body weight in 1/2 ounce of water. Use a dropper or oral syringe. Take the mixed solution carefully squirt the mixture into the pet's mouth along the pet's tooth line but not down the throat to avoid choking and the getting the fluid in the lungs. In addition you could put 3-6 drops in the water bowl whenever you empty and refill the bowl it will keep it fresh and germ free. Do this for three weeks and then stop use for one week then repeat.

**As a Natural Candida Remedy: Oxy-pH Boost™ For Pets can be combined with Total-Biotics®**

When dealing with Yeast in pets you must use Total-Biotics® and Oxy-pH Boost™ together as a combined treatment. The Oxy-pH Boost™ is a temporary treatment and is on an as needed basis, whereas the Total-Biotics® should be a lifelong approach to balancing a healthy pet.

## Directions for adding Total-Biotics® for a candida program:

When you use Total-Biotics® on your pets' food we recommend you double the normal dose to help get the yeast under control. That would make it two scoops of Total-Biotics® per cup of food, whenever you feed your pet. Try to use Oxy-pH Boost™ away from the probiotics. We recommend waiting at least one to two hours before using Oxy-pH Boost™ after giving your pet any Probiotics. The small amount of Oxy-pH Boost™ in the water bowl will not be a problem.

## When adding Oxy-pH Boost™ to the water dish:

Add 3-6 drops of the Oxy-pH Boost™ Concentrate to a pet's water dish each time it is emptied and refilled, especially when traveling out of state or country. Oxy-pH Boost™ for pets can help keep the water pure, and may help freshen breath or promote gum health, for you and your pet. Do this for three weeks and then stop use for one week then repeat.

## Topical use for pets:

To use Oxy-pH Boost™ topically: mix one teaspoon with 1/2 cup of water. Then dip in a cotton ball or small gauze and use on the area that needs to be treated. You may also use this solution in a small spray bottle, and then blot off excess. For pets this can be used on the ears or their bellies. Or wherever there might be a bug bite or irritation on the skin. **Do not use full strength, always dilute in water.** Continue three times a day until condition clears up.

## Oral Hygiene and bad breath:

Oxy-pH Boost™ it's perfect for spraying on or brushing your pet's teeth. Place 8 drops in a glass with about 1 ounce purified of water and soak the tooth brush bristles before brushing. Or put the diluted mixture in a spray bottle and spray it on. You may also use Ultra-Pure MSM™ for pets on the toothbrush to remove stains, plaque and for general good oral health.
